

Moscou, Soc. Nat. Nouv. Mém. 926 Grant Ave

II. 259  
(1832)

Rockford Ills  
Feb 21/64

My dear Mr Watson

Was Dr Gray the  
paper by Frantzen which is  
given by Andersson under the  
abbreviated title "De Sal frigida  
in Mém. de la Soc. des Nat. de Moscou  
t 8, p 281-346" —

I know he has many memoirs  
of the kind extracted from the  
Transactions in which they were  
originally published — possibly you  
may have the volume in the  
Library — If so would you dare  
risk either by registered mail — to be  
returned in a few days — Or if it is  
not asking too much would you copy  
for me the descriptions of Salix Callicarpæ  
and S. diplodictya — published therein —

And will you — I'm almost ashamed  
to name anything more — please send  
me a rough tracing of the plate in  
Ledeb. Fl Rossie t 468 of S. glauca &  
macrocarpa

I have in Nov. 2 on - which  
from Labrador allows the distinction  
and I place about which I have  
been exercising my mind at all  
spells for a few past winter  
months, and very satisfactory  
conclusions - A very brief report from  
Kew. but made after "four hours  
work at the Herbarium" does not  
help much save in a negative way  
by saying that the specimens are  
not "accurately identifiable among our  
North American Salices".

Yours very truly  
W. L. Webb
